

Project Summary Report

Region Selection: The region selected for resource deployment is South Africa North. This selection optimizes latency and network performance given the geographic proximity to my current operational location.

Shared Responsibility Model: For the deployed Storage Account (which falls under Infrastructure/Platform as a Service), the Shared Responsibility Model dictates that Microsoft Azure is responsible for securing the physical infrastructure, hosts, and network. As the user, I retain responsibility for data governance, configuring access controls (RBAC), and managing the specific configurations of the storage service to ensure my data remains secure.
